

Customer Network Solutions

Delivering your infrastructure projects with Openreach

No job too small or too big

We could be simply moving a telephone pole, replacing an overhead wire or an underground cable or laying fibre optic cable across an entire commercial development. Whatever the job we'll be able to tackle it.

Work directly with Openreach

You can engage directly with Openreach to ensure that our network is built at the earliest stage of your construction or refit project.

It's a common misunderstanding that Openreach can only work directly with communications providers. Our Infrastructure Solutions team will work with you to understand your needs and support the success of your projects.

Get connected quickly

Wondering how quickly you or your customers can get connected?

Get ahead of the game. With CNS Network in advance, we can build our network at the very earliest phases of your construction project. That means fewer delays and you can market your developments as "Gigabit Ready".

Move any part of the Openreach network

No one understands our network like us. Let us work directly with you whether the Openreach network is on your site or in the street to ensure that we complete the move of any Openreach equipment or cables in the most efficient and effective way possible.

Anything else we can do while we are on your site?

Get more out of our engineers while they are on your site. As well as completing work on the Openreach network, our engineers can also fit internal network cabling, Wi-Fi and other devices.

Future proofing your world

We can provide a fibre network that meets your needs both now and in the future. You may have heard about our ultrafast speed fibre to the premises (FTTP) solution, but did you know that we can now bring fibre directly to your desk with PON (Passive Optical Networks)? Talk to us about how we could deliver this at a comparable cost to traditional data cabling.

UK wide teams

We've got a regionally located UK-wide team that can undertake large projects with a national scope. We'll produce individual estimates for every project to ensure everything is clear upfront.

Our delivery in action

Turner & Townsend and Birmingham City Council brought us in to provide a live fibre connection for each tenanted unit in a 240,000sqft new build facility, comprised of 78 tenant units, nine warehouses, two retail units, a café and a management office. They were impressed with the speed of delivery.

"Openreach quickly identified a solution for our new Birmingham Wholesale Market site that surpassed our expectations from a time and quality perspective. The works were completed in a little over a week – a big achievement considering the very large scale of the site."

Turner & Townsend**

The services we offer

Project management
in conjunction
with delivery

CNS Network
in advance

Fully resilient
networking

Planning, building and
moving of Openreach and
your private networks

Wi-Fi plan
and build

Additional
services using on
site engineers

Data cabling,
including PON
option

Making your campus
or commercial site
Gigabit fibre ready

Let's get started

To get in contact with us call our customer service team on **0800 783 2023** – they'll work with you to understand your project and what you're trying to achieve, offering a cost effective plan for your chosen work. And when you're ready, they'll make an appointment for one of our trained engineers or surveyors to get started.

Openreach is Britain's digital network business. We connect homes, mobile phone masts, schools, shops, banks, hospitals, libraries, broadcasters, governments and businesses – large and small – to the world.
